

Payment Security Policy

While paying for the order with a bank card, the payment processing (including entering the card number) takes place on the secure page of the processing system. This means that your confidential data (card details, registration information, etc.) is not sent to us, its processing is fully protected and no one can obtain personal and banking data. When working with card data, we apply the information security standard developed by the international payment systems Visa and MasterCard - Payment Card Industry Data Security Standard (PCI DSS), which ensures secure processing of the holder's bank card details. The data transmission technology used guarantees security for transactions with Bank cards through the use of Secure Sockets Layer (SSL) protocols.
